March 13, 2017

The Honorable Ken Calvert
Chairman, Interior-Env. Subcm.
Committee on Appropriations
U.S. House of Representatives
Washington, DC 20515

The Honorable Betty McCollum
Committee on Appropriations
U.S. House of Representatives
Washington, DC 20515

Dear Chairman Calvert and Ranking Member McCollum:

As you prepare the Fiscal Year 2018 Interior, Environment and Related Agencies appropriations bill, the undersigned members of the Friends of the National Institute of Environmental Health Sciences (NIEHS) would like to call your attention to the vital work being carried out by the NIH/National Institute of Environmental Health Sciences (NIEHS) as a result of the annual appropriation provided for this work in the Subcommittee’s bill.

Within the Interior-Environment Appropriations bill, the NIEHS’s Superfund Program (SRP) supports research to address the health impacts from hazardous substances in the environment, develops clean-up technologies for hazardous waste, and advances new risk assessment methods. The SRP provides the scientific research used by the WTP to train hazardous waste workers, to accelerate remediation efforts, and to prevent health consequences related to toxicant exposure. These programs have provided the safety tools and training to transform contaminated sites into new opportunities for residential, industrial, and commercial ventures – which means new jobs for the surrounding community and new sources of revenue for state and local governments.

The SRP’s research portfolio and research findings include:

- Research by the SRP grantees at the University of California, San Diego School of Medicine, involving carbon tetrachloride-induced chronic liver injury led to the discovery of cells responsible for regenerating liver tissue and could potentially lead to an effective treatment of steatosis and steatohepatitis in the liver, which may affect more than 40 million Americans.
- SRP researchers at Duke University are investigating ways to use naturally occurring cellulose nanomaterials for water treatment technologies, which are much more affordable and less energy-intensive than many other current technologies.
- SRP scientists at the University of California, Davis determined the molecular mechanism underlying the beneficial effects of inhibiting an enzyme after heart attacks, opening the door for a new therapy to stop cardiac fibrosis.
- Recently in Alaska, the WTP delivered 61 courses for 1,019 workers in remote areas that filled critical hazardous material and emergency response training gaps such as those in Goodnews Bay, Togiak, Manokotak, and an association of the Native Villages in the Bering Straits Region.
- During a train derailment and evacuation in Marysville, TN, WTP training helped workers at Blount Hospital ensured that no staff members were exposed to hazardous chemicals, patients were safe, and contaminants were kept outside the buildings.

We ask for your leadership in ensuring that the NIH/NIEHS Superfund-related activities receive an increase of $1.5 million in the Fiscal Year 2018 bill, which will help to keep our air, soil, and water safe. Additionally, the Subcommittee’s investment in NIEHS funding creates private sector jobs and bolsters the economy. If the opportunity to meet the current investment needs of the NIEHS Superfund Research Program and Worker Training Program is passed by, we risk reversing a variety of public health, environmental, and economic gains of the past 25 years. The sequester followed by flat funding for the last three years has meant that very deserving research and training plans have not been supported. Due to flat funding, for example, approximately 25% of hazardous waste and emergency response training has gone unfunded meaning our communities are more exposed to public health harm when disaster strikes. Representatives from this diverse coalition would welcome the opportunity to speak with you further about the very important work being carried out by NIEHS.

Sincerely,
